Vivek,

Have you tried using Fedora Core 8? I had extremely good luck with FC8 finding every single device on my HP dv9700 laptop (RHEL 5.1 did not work so well). Although I cannot find software to drive it, it even detected my finger print reader.

Perhaps if you start with FC8, you can see how your video card is being identified and then from there find a compatible driver.

Hello ALL,

I tried to update the kernel-2.6.18-53.1.4.el5

But nothing happen

Problem is still alive.

waiting for more suggestion.....

Can you update to latest kernel and check?

2.6.18-53.1.4.el5

Hello All,

I hav a HP laptop 6720s.

I installed Win XP which is working fine, its Graphics is good.

But when i installed RHEL 5 server, it did not detect Video Graphics

RE: Video card not detected in rhel5 server

card.

Xp shows a Intel 965 Chipset family, but RHEL 5 did not.
and centos 5 also did not detect it.

Help me to detect the video card so that graphics can start.
