----snip----

I had no battery info after installing SuSE 8.2 on my Compaq laptop, but after following a tip on this list it works just fine.

The tip was:

In order to get my battery monitor up and running under kde (and I'd assume gnome as well), I had to add the following two lines to /etc/init.d/boot.local.

```
modprobe ac
modprobe battery
```

Hope this helps.

Thanks to Michael Stacco for the tip!

Lennart
