I have a Windows XP partition and whilst I do not use it, I need to migrate files across from time to time so I made an attempt to mount it from the SuSE partitioner.

I configured the fstab options as read-only etc.

When it comes to actually applying the settings, there are absolutely no changes made to my /etc/fstab.

I can use the mount command if I specify the device, filesystem and mount point but I can only do this as admin, and I do not wish to have to login as admin to transfer files. (also, other users of the system have files on the partition and I don't want to give them root access just for that)

Any help would be greatly appreciated
