I've had a bunch of complaints from co-workers over the last couple days that their sound on specifically the laptop mentioned below isn't working. So I said I would forward what the deal was to the SLE and see if any of you had suggestions. I'm doing this because the SLE generates too much traffic and none of them wanted to join with that much mail coming from one list. *laugh*

Anyway. Any suggestions would rock.

Hello, I have a problem with sound working under 8.2 on a Toshiba Tecra 8100. ALSA claims that the Yamaha card in it (YMF-744B [DS-1S Audio Controller]) has been supported since version 0.5.8 but it does not. Sound used to work just fine on SuSe 7.3, but when I changed to 8.1 it stopped working. I initially thought it was something I had done, but a friend with the same system has the exact same problem. I have now tested it on a third laptop with the exact same results.

I even tried grabbing the latest ALSA src, compiling and installing it with no luck. Any help would be appreciated.

If two men agree on everything, you can be sure that only one of them is doing the thinking.
