I'm having a dickens of a time getting OO 1.1rc2 to work. It installed fine using the /net parameter and installs workstation setups with ease. However, upon first starting it (the program), a dialog pops up stating an unrecoverable error has occurred and shuts down. Checking Google, a possible culprit was glibc 2.3.1 and upgrading to 2.3.2 "supposedly" fixes it. I already have the latter version and it ain't helpin'. Any suggestions are appreciated (besides the ones saying to go to Openoffice.org which I've already done). Thanks!

Zach
