I have been using an older version of spamassassin by piping mail to spamassassin in my .procmailrc, then checking the X-Spam-Flag header. I just installed the SuSE RPM and, as usual, I can't figure out what the SuSE automagic does and what I have to do. In particular the documentation suggests using spamd, the daemon, rather than spamassassin. But how do I do this? And what is spamc?

Thanks, Henry Harpending
