Hi all...

I'm trying to get GPG to work with Kmail. I'm having alot of problems. I've got a key set up under GPG that works at the command line. But when I try to sign an email under Kmail it tells me that "You entered an invalid Passphrase." BUT I'm sure that it's good.

Does anyone know what I should do? BTW I'm using 8.2 etc..

TIA

JIM

Our country was colonized by the religious, political, economic, and criminal rejects of every country in the world. We have been carefully breeding insane, obsessive, fanatic lunatics with each other for over 400 years, resulting in the glorious strain of humanity known as "Americans". You have to expect some... peculiarities.
