The SuSE partitioner should work. I can't remember ever having a problem with it myself (have a friend that used it and has xp, 2kpro, 2kserver, suse and gentoo on the same machine, but I think he had to do some tinkering). Haven't used 8.x either so I really can't say. I use Partition magic sometimes, but it's not free. A google search or a search of the archives might help if you get impatient waiting for a working reply. I know I've seen this on the list a while back.

will
