Hello, Sol, how are you ?

i hope you are great.

My question regards the process that is needed to make the import of *.csv files in to the Kaddressbook, because, i can make the import, for some reason that i don't understand, the names of my contacts that was suppose to appear in the list o Kaddressbook, the only think that is shown is blanck spaces.

It's strange.

I' mean, can you describe exactlly what you do, if you use kmail and Kaddressbook ?

Thanks man, for your time.

Best Regards

Marco Oliveira
