Hi

I have problem with my home pc, my daughter accidentally powered off my pc while I was in the middle of a Palm hot sync and now when it is rebooting it hangs on the loading hot plug devices, what steps should I take to get my pc back up and running. I tried to boot from the cd and do the rescue option but I can't mount the partition on the hard disk. I don't want to reinstall and this all happened just before I was about to backup my pc overnight what luck I have. Is there a check disk utility I can run in SuSE ? I am running SuSE 8.2 with all the latest patches.

Subject: [SLE] Firewall musings

I'm curious O:-)

Is there some kind of script or program that takes the output from the firewall logs, and makes out a nice report?

Like resolving hostnames, replacing the local ip by "local" (separating this incoming from outgoing), the port numbers by services (including those used by edonkey and the lot), etc?

SuSE: [SLE] Boot problem after accidental poweroff

And then, statistics?
