I just got an LCD screen, and I don't believe it is true. My LCD monitor DOES have a hsync range as well as a vsync range. BTW, as a side note, while waiting for the monitor to arrive, I went to the manufacturer's website, downloaded the Windows inf file, got the info for my 'soon to be' monitor, which I then entered into /usr/X11R6/lib/sax/api/data/cdb/Monitors. I was hoping hw detection would 'pick it up automatically' when it came, but it didn't. Had to ctl-alt-f1, login and go to init 3, then start sax2, which DID auto detect the new monitor, and setup everything relating to the monitor perfectly. HTH.
