Hi all,

just installed Suse 8.2 Pro in my desktop (in my laptop it gave no problems!) and it looks like it cannot find the right monitor.

I have a 15" flat monitor, and I have tried the 1503FP and a standard LCD 1024x768@75Hz In both cases Sax2 fries when doing the test (mouse not working and no response to keyboard)

(I got those from looking through the list)

If in any case I get to a not too bad (which means black margins on the screen) configuration and I save... well it hangs with a black screen and cursor blinking.

Has anyone sorted out this monitor?

Thanks,

Sergio
