I called Siemens this morning and an attendant told me that although siemens doesn't provide a software to support a50 (maybe next version of SoftDataLink will – "they are working to this") it can exchange data (not by now). Perhaps that's why nothing is said about a50 exchanging data to PC. They didn't want to create expectation.

Ralf tell us it is possible:

http://ralf-eisenreich.de/linux_si.89.0.html

Some forums agree (see Club-Siemens Forum:

<http://www.club-siemens.net/forum/viewthread.php?tid=23636>

(this one suggest to use the program vissie with a50)

<http://www.club-siemens.net/forum/viewthread.php?tid=23072>

(this guy is using a50 with an USB cable)

<http://www.club-siemens.net/forum/viewthread.php?tid=23076>

(upgrading form a50 to c45)

So, it is possible. Just Siemens is avoid to talk before launch a better SoftDataLink.

As the authors' e-mail is hidden , I can't contact them to know wich cable they are using.

Any more ideas?

a.
