To: Suse <suse-linux-e@suse.com>

I would like to be able to create a local mirror of the Suse FTP website for packages.

This will save a lot of bandwidth in the future.

For starters, I was going to install the packages from the suse tree into /srv/ftp/suse/

But none of those package are seen by YAST when I set it up as:

Source Of Installation == "dir:///srv/ftp/suse/" or
"dir:///srv/ftp/suse/suse/"

With a directory tree of: /srv/ftp/suse/suse/(i586|i686|...)

I doesn't see anything.

I was assuming if I could get this to work, then I could use FTP for access from the rest of my clients.
