Hail List!

I have a simple question... I write cd's in linux using cdrecord and mkisofs!

I've assumed that writing a 800MB cd with --overburn flag set will do the job but every time i get an error after 702 or 703 MB writtien as if i had a 700MB cd!

So: my question is how can i write 90MIN cds?

Danke!!

ing. Adrian Costescu
