Hi –

One of the things that seems to have fallen off the wagon in my upgrade to SuSE 9.0 is the ability to play AVI files.

I've got some little animations made with Blender. They are JPEG-based AVIs. They've always played perfectly under previous versions of SUSE using the KDE embedded viewer or AKtion or MPlayer.

Now they won't play at all. Xine tells me that they are MJPEG and it's an unsupported codec.

I've tried installed the old KDE multimedia stuff with YAST but they won't play these files either.

Any suggestions?

– Ken
