Hi all –

I finally got my kmenu to start showing all the entries.

The solution turned out to be a variant on the one that worked for Øystein Olsen. He found that editing an entry caused all his menu folders to display properly. That didn't work for me. But dragging the menu item folders that would never display to different positions in the menu tree did the trick.

Obvious in hindsight.

Anyway, thanks to everyone who suggested solutions and took the time to try and fix my problem.

Best wishes

– ken
