Im very new to Suse, and am having a little problem understanding whats happening with Java.

Open Office keeps complaining about JRE being missing.

I tried to install eclipse and it JRE/JDK, but it couldn't find and install it.

How do I go about installing a JDK under Suse ?

I usually just download the .tar.gz and copy it to /usr/share/jdk1.4/ etc...

But I am trying to do it the proper way this time....

Mof.
