Hi all,

Don't know if anyone else used Krusader or not here. I liked it for doing several things Konqueror was not suited to do as easily. Seems that SuSE decided not to include it in the 9.0 version and not sure why, but it is still being developed, so I decided to make a rpm. The rpm should be SuSE approved, as I used their src.rpm spec file to create both the 9.0 src.rpm and rpm for the latest version, 1.30.

I have contacted Richard Bos about including it in the apt repository, but if anyone else would like it or add it to a mirror for others to download, please let me know.

Regards,  
Lee
