Hi, group.

I just managed to upgrade my SuSE8.2 to 9.0 using apt-get. Almost everything work correctly, except the sound. I am using k_athlon-2.4.21-144, and the sound card is AC97 integrated card, using via82xx module, it worked fine in SuSE8.0/8.1/8.2, the releven part of my /etc/module.conf file are:

```
=====0
alias char-major-116 snd
alias snd-card-0 snd-via686
alias sound-slot-0 snd-card-0
alias sound-service-0-0 snd-mixer-oss
alias sound-service-0-1 snd-seq-oss
alias sound-service-0-3 snd-pcm-oss
alias sound-service-0-8 snd-seq-oss
alias sound-service-0-11 snd-mixer-oss
alias sound-service-0-12 snd-pcm-oss
options snd-via686 snd_ac97_clock=48000 snd_enable=1 snd
_index=0
options snd snd_cards_limit=1 snd_major=116
=====
```

And the syslog just give the following errors:

```
=====
<notice>/etc/init.d/rc5.d/S13alsasound start
Starting sound driver: via686modprobe: Can't locate mod
ule snd-via686
failed
<notice>'/etc/init.d/rc5.d/S13alsasound start' exits wit
h status 0
=====
```

I would be very apprecaited for your help. Thanks.
