-----<text heavily snipped>-----
```

Patrick,

when i did on Konsole: [gar@box1 gar]S lpstat -a <return>
it returned:

```
color accepting requests since Jan 01 00:00
high accepting requests since Jan 01 00:00
lp accepting requests since Jan 01 00:00
printer1 accepting requests since Jan 01 00:00
```

so after making a copy of the file unix.js, I modified as root using vi
the above referenced line to read:

```
"pref("print.printer_list", "color high lp printer1 kprinter xpp"); //
list of printers, separated by spaces" (without the quotes)
```

I then went into Mozilla and under file ----> print, i selected lp,
pressed print, and it worked !!!

Thanks for all the help.

And thanks for not leaving this as an exercise to be completed
by the reader. HAND
