I think I have narrowed it down to the xserver I think  
I let run without Xserver running and it does not reboot  
Is there a new Xserver for 9 yet

I have a P4 titan motherboard with an Intel 845GL chipset and it  
reboots all by it self

I have suse 9.0 installed

I have done all the update though yast and it still reboots it self

It does it just setting there

checking the logs it seem to do it when a cron job is running

Is their a way to check if that is the case

thanks

I can send the logs if that would help

I don't want to just post them

I don't have a clue any help would be excepted

thanks
