Hello all!

I must have post X-mas mental block or something..

But no matter how i read the IPTABLES pages and MAN's...

How the fck do i write a rule to BLOCK a IP on the INSIDE net.

That is i want to prevent one machine to use the internet at certain hours.

(Kiddies past bedtime)

And also, how do i drop the connection if it allready has established traffic out to internet.

I tried to flush the iptable but apparently allready established traffic stil got thru..

So.

What ruleset do i use to simply disconnect the specific IP?

I want to use it in a cronjob to "enforce" bedtime hours... :)
