As I'm all sure everybody is aware (I hope) SUSE have announced their plan to release a 2.6 based version for summer of 2004, I have read that this will be for SLES9, have they discontinued their standard distro since this Novell purchase?

I realise they haven't said anything like that; but put me out of my fear please. :P

SUSE – 1,000 Possibilities, not 1,000 Vulnerabilities
