I have successfully loaded SuSE 9 Pro on my notebook.

I have been toying with the 82801DB AC'97 internal modem.

Using the Hardware app brings up lots of information about the modem and dialup is set to use pppo.

But ... no actual dialing is going on.

It says it is using irq5 but Driver -- Modules -- Active says "No", and Modprobe says "Yes" and "modprobe slamrmo"

Help? Thanks! doc
