Thanx for the pointer. I'll have a look at it.

Indeed. This looks like it's worth investigating. Maybe I should think about updating my SA too...

I'm currently looking into Mail::IMAPClient, partly because it seems to be the way to go for this particular situation, partly because if I learn how to use that, then I can do something *else* that I've wanted for a while;

A max on the number of msgs in any specific folder (like this one, SLE). What I want is to basically turn the folder into a FIFO, and have a script that rotates the oldest msgs out into a dated "archive".

I would, in fact, have preferred to work directly on the files, but I was told Cyrus wouldn't like this... I guess it's not such a bad idea to learn the Perl/IMAP interface, it's just the same old;

"Every time I wanna do something, I gotta do/fix/learn something else first" -thing... Oh well... ;P

Ahh... you *know*? ;)

But he doesn't. And besides, you don't know this guy... He has a natural ability to ...well... be 'unlucky'...

<snip>

Yeah, well... one other part of this whole idea, is to eventually cut/get rid of external expenses...

Cheers,
Jon
