I hate this printer!!!

I asked the list a few days ago if someone has managed to install this printer on a SuSE8.1 fully patched box.

Someone recommended to use the HP 5550 driver, however, it didn't work for me.

I do not care if I can print with it from SuSE. What my main concern is to be able to print from Windows since this printer is available via Samba.

Any other ideas? Thanks guys!

Chris

PS: The printer has a USB connection. YAST sees it but no driver for it. I have already tried and downloaded the hpijs.rpm file, untar it, run ./configure but there is no make file generated as the instructions say....

I hate this printer!
