Thanks for the Yast help, and kjots works to a degree. Sometimes a new book will strangely dissappear. At startup from command line the following errors:

```
Ellie@linux:~/dc> kjots
```

```
QLayout "unnamed" added to QButtonGroup "ButtonGroup_2", which already has a layout
```

```
kdecore (KAction): WARNING: KAction::plugAccel(): call to deprecated action.
```

```
kdecore (KAction): WARNING: KAction::plugAccel(): call to deprecated action.
```

I am close to uninstalling– but –any one have a better idea? Not crazy about knotes but it looks stable. Thanks

ellie
