Can anybody help with this message in /var/log/warn? We get it when the machine boots as well.

mtrr: type mismatch for fd000000,800000 old: write-back new:
write-combining

Doing a little googling and of course reading Documentation/mtrr.txt it looks like it is video related, but this is a server, no one was using it at the time of these messages. Yes X is running, I know, I know, but with nothing happening on the console, I wouldn't expect to see video related errors in the logs.

The errors occurred twice today, right around the time we were having other network related problems on the machine.

This is the same Dell 6650 that I've been having intermittent hangs and other nastiness, wondering if this is related.

Your thoughts are appreciated.

Andy
