Hello everybody.

This is my first time I post in this list.

I have been using SuSE since many years. Now I am using v. 8.1.

It worked fine until yesterday, when I resized (enlarging it) the reiser partition where SuSE is installed. All seemed OK. But when I start the system here what happens:

system boots and the kernel is loaded. Then the services start. But when the process reaches "starting kdm service" the system crashes and reboots. (endless loop).

Any hint?

Bye

emilio
