.....<snipped but saved>.....

Thanks John, Jon, & Jon for replying. It is appreciated.

John, don't really know what Kmail format is. If I check on the properties of that mailbox the format is greyed out, but looking carefully it looks like mbox. Anyway, I know nothing about scripts, where to put them, or how to execute them. Wish I did :( Maybe someday I will. I am trying.

Jon & Jon Both of you sent me basically the same thing with a slightly different approach, and I said "A Ha !" that is the problem. I understood what you were telling me. Unfortunately, it did not work by using either of the suggestions. Get the same old " "No such file or directory  
at /usr/lib/perl5/site\_perl/5.8.0/Mail/SpamAssassin/CmdLearn.pm line 120."

So then I created a regular (non-mail) directory and moved all of the MissedSpam messages into it and did an sa-learn on it. Told me it learned from 8 of the 50+ messages I put in there. Don't know why it learned from only 8 out of 50 ?? but I guess that is another story.

SuSE: Re: [SLE] sa-learn refuses to learn.

Anyway, can't keep doing that because I would spend forever moving messages around so sa-learn would work. If any of you have more suggestions or guidance it would really be appreciated.

Thanks again, Bob.S

PS John, If you could point me at some way of learning how to use scripts it would also be really appreciated.
