Hi,

I am trying to install SuSE 9.0 onto the subject laptop and have been stumped by a installation failure. When trying to install, it gets part way through identifying the hardware, and when it tries to start the GUI installer, I get a "keyboard not present" error, and a couple of messages about try to connect the console to /dev/ttyS0. Aside from the fact that the laptop does not have a serial port to do this, I can not see any way to get the installer to get past this point. I have tried to do a text only install, and it still fails at the same spot. I am able to use the keyboard to interact with the program, and I am able to see the characters that I type and such, so think that this is just an "X" issue of some sort. Can anyone help with this problem? How do I get the install to go?

System Specs:

Toshiba Satellite A33

P4 2.8GHz

512MB Ram

ATI Mobility Radeon 9000 (IGP)(64M Shared with system RAM)

CD-RW/DVD drive

Realtek 10/100 Network

Realtek AC'97 audio

Atheros AR5001X+ wireless

Toshiba "software" modem
