

SuSE: [SLE] restore point

[SLE] restore point

Hi folks,

I was wondering if there is a way to create a restore point in Suse 9.0 pro?

I am having problems w/ my ethernet connection after doing an update, and to rectify the situation, I've been doing a fresh install but this takes forever. Is there a way that I can create a restore point before I do the update so that after I update & try various things & if all of them fail that i can just go back to the restore point before the update. I guess this would be applicable to more than just my ethernet issue as it would be nice to do a restore point before I try out any new program/update that ends up giving me issues that i can't resolve immediately.

Thanks,

vu
