Hi All,

I found that when I use gnomesu to start an app as root, it does not use root's environment, but my own.

For example, if I start gnome-terminal as root, using gnomesu, the root terminal has my \$USER, \$HOME, \$LOGUSER, etc variables.

How can I get gnomesu to run the application in root's environment?

There is not man for gnomesu and Google does not give much.

Thanks
