Hello. I'm having some trouble getting the pidentd package work.

Seems to me it's either not working at all, or it's some configuration option.

I have identd activated and running i yast and everything seems fine, but when I connect to irc for example, it still wont find an ident.

in.identd is running in the in the processlist and there is a pidentd configuration-file in /etc/xinetd.d/

Anyone know what I'm missing?
