At boot time, I am getting the following errors, but not sure what I did to cause them – or how to fix the problem. Also, I have lost all network services between the 2 PC's on my home LAN. I am especially interested in restoring NFS. The following message appears in boot.msg:

```
#####
```

```
<notice>/etc/init.d/rc5.d/S01random start' exits with status 0
```

```
<notice>/etc/init.d/rc5.d/S05network start
```

```
Setting up network interfaces:
```

```
lo  
done
```

```
eth0  
done
```

```
ppp0  
skipped
```

```
ppp1  
skipped
```

```
INFO: Dont worry about skipped interfaces; they will be set up  
dynamically by service pcmcia, hotplug or when dialing.
```

```
Starting hotplugging services [

```
<notice>/etc/init.d/rc5.d/S05network start'
```

  
exits with status 0
```

```
<notice>/etc/init.d/rc5.d/S07hotplug start
```

```
net pci usbinsmod: insmod: a module named sg already exists
```

```
insmod: insmod: insmod char-major-21 failed
```

```
insmod: Using /lib/modules/2.4.18-4GB/kernel/drivers/usb/printer.o
```

```
insmod: Symbol version prefix "
```

```
^Ginsmod: insmod: a module named st already exists
```

SuSE: [SLE] insmod problems

```
insmod: insmod: insmod char-major-9 failed
```

```
]
```

```
#####
```

I see the entries in modules.conf, but have no idea what they mean or why they are failing. What are "sg" & "st"? If more info is needed, let me know.
