Hi,

I'm trying to customize the look of KMenu in a KDE 3.2.1 system. I've looked into the freedesktop.org 'Desktop Menu Specification', and with some trial and error I've got things running.

But, I want to disable the 'Run Command' option. And I can't get it done. I know this is managed by the 'runapplet.desktop' file, but how do I disable this in KMenu?
