I've been able to use my Fujifilm 3800 camera directly connected via USB to download pictures from the XD card to hd. I've been searching for an answer for a while and am turning to this list as a last resort.

I would like to use the "Fujifilm Image Memory card Reader DPC-R1" to move the pictures from the XD card to the HD. This is a two in one card reader for XD and Smartmedia Cards. Is it possible to mount this the same way I was able to mount the camera? I see no option for that seeing as how dmesg doesn't show up with a drive option for this reader. Please let me know if I'm riding on the short bus and if there is anything I can do to get off this sticky seat.
