I seem to have trouble getting recognised by my ISP

Can anyone point out to an ignorant novice what is going on here, and how to fix it.

How do I inform myself about "signal 15" & "exit code 19" etc

Where does the "[09]" in the "EARLY LOG" come from ?

I have installed 8.2 personal – I haven't come across any other problems yet

EARLY LOG

SuSE Meta pppd (smpppd-ifcfg), Version 1.00 on linux.

We are disconnected.

trying to connect to smpppd

connect to smpppd

We are disconnected.

We are connecting.

pppd: Plugin passwordfd.so loaded.

pppd: --> WvDial: Internet dialer version 1.42

pppd: --> Initializing modem.

pppd: --> Sending: ATZ

pppd: ATZ

pppd: OK

pppd: --> Sending: AT&C1&D2

pppd: AT&C1&D2

pppd: OK

pppd: --> Sending: ATM1

pppd: ATM1

pppd: OK

pppd: --> Modem initialized.

pppd: --> Sending: ATDT086707070

pppd: --> Waiting for carrier.

pppd: ATDT086707070

pppd: CONNECT 115200

SuSE: [SLE] Still cant connect to my ISP

```
pppd: --> Carrier detected. Waiting for prompt.
pppd: [09]
pppd: login:
pppd: --> Looks like a login prompt.
pppd: --> Sending: kkeith
pppd: kkeith
pppd: Password:
pppd: --> Looks like a password prompt.
pppd: --> Sending: (password)
pppd: --> Don't know what to do! Starting pppd and hoping for the best.
pppd: Serial connection established.
pppd: Using interface ppp0
pppd: Connect: ppp0 <--> /dev/ttyS0
We are disconnecting.
pppd: Terminating on signal 15.
We are disconnecting.
We are disconnected.
pppd died: non-normal exit
```

```
##### LATER LOG #####
(I went back to set-up and enabled "stupid Mode")
```

```
SuSE Meta pppd (smpppd-ifcfg), Version 1.00 on linux.
We are disconnected.
trying to connect to smpppd
connect to smpppd
We are disconnected.
We are connecting.
pppd: Plugin passwordfd.so loaded.
pppd: --> WvDial: Internet dialer version 1.42
pppd: --> Initializing modem.
pppd: --> Sending: ATZ
pppd: ATZ
