To: SuSE <suse-linux-e@suse.com>

I've installed 9.1 yesterday and am trying to get it setup with the same ability as my 8.2 version. Currently I have a problem with no sound when running kdetv. I've check the sound card under yast2 and can test for sound. Also, other applications show sound. I really need ideas at what to look for which will affect my problem. I've tried the `configure-kdetv` setting sound to ALSA Mixer Plugin using Line as the mixer element. The sound card is an Ensoniq Audio PCI. I checked all the settings I can think of under SuSE 8.2 (where I've never had problems with sound). This is really confusing. Can anyone help?

BTW, thanks to those who helped me get the video working after I installed the nvidia drivers.
