This is a good question and I would like to add to it. In 9.0, I could use the right shift–right win keys in combo to give me special characters, international letters, degree sign for tempertures, etc., but that doesn't work in 9.1! It seems to start, but never gives you the special character. Or rather I should say that rt shift–rt win activates something, but not the compose key like it use too. Where did that function go. This is for a US keyboard setup, pc–104 setting.
