Hi everyone,

I have a SuSE 8.2 Pro NAS box. I also have 2 web servers mounting the web data directory exported from the NAS box.

All three of these machines are patched the latest SuSE packages and kernel.

Whenever I run an ls or find on the web directory from the web servers, I get the "Stale NFS File Handle" error on some files. To fix this issue, I have to unmount then remount the web directory on the two web servers. Do you know of a fix for this problem?

Any help will be greatly appreciated.

Thanks,  
Mouncef
