I have a need to print a standard form with text overlayed on it.

I can keep the form as a pcl or a pdf or a tif.

I can figure out out to make a matching pcl or pdf or tif from the text I want to overlay.

What I can not seem to find is a tool to allow me to actually overlay the text on the original form. I searched freshmeat, I tried to find something in ghostscript, but apparently I search badly because I can not seem to find a tool to do this and it seems it must exist.

Any suggestions?

Greg Engel
