Hi all,

a simple question I think. I'm going to upgrade my old P2 233 Intel motherboard with a 'slightly' newer P3 733 motherboard. As I'm sticking with a Pentium processor, I think I don't need to do anything like switch the kernel as it'll still be the same one. All that I will probably need to do is sort out any onboard stuff like graphics, sound, etc.

Does this sound correct, or is there something that I've forgotten about?

Bruce
