Hello,

Azureus is a Java BitTorrent Client plenty of nice features. I strong recommend it.

<http://azureus.sourceforge.net/index.php>

As user, I am impressed. After many hours (days) of use it didn't block my small ADSL-router. In comparison, I've always had problems with all *mule clients.

You can download fresh azureus RPMs (SuSE 8.2, 9.0 and 9.1) here:

<ftp://ftp.gwdg.de/pub/linux/misc/suser-gbv/rpms>

The source rpms are actually semi-source, because it includes some GTK precompiled runtime libraries.

NOTE than it requires recent java (1.4.x). Because of too many implementations of Java, these RPMs don't check Java at installation time. If your're prompted about the lack of java, you can download and install latest JRE from here:

<http://www.java.com/en/download/manual.jsp>

Enjoy downloading lots of torrents ;))

Guillermo.
