Greetings,

A mind over matter issue!

I have one PC. I have no money! (so don't tell me to buy a second computer :=))

I obtained a second screen and USB keyboard and USB mouse.

I want to add them to my existing PC as a second work station.

this will allow 2 users to physically work on one PC at the same time.

The question does this setup have a name? Is there something like out there in jungle somewhere?

I can't find any docs on it because I don't what it called

anyone have any ideas please ?

thanks
