I am running a mailserver with squirrelmail.

If I open a Mozilla (or Konq, same problem) window to login to account 1, and a second window to login to a different mail-account (account 2) then it happens that when I switch between browserwindows, then I get to see the mail from the last account I logged into, in both windows.

This does not happen in XP with IE6, I can maintain 6 windows with all different accounts logged in on the same desktop.

Where is the problem? Or is this on purpose?

Using Suse 9.1, KDE 3.2.1, Mozilla 1.6

Squirrelmail 1.4.2
