Hi:

My MatLab flexlm script fails at boot because the install script put it as the first service to start, but it needs network up. It works fine if I start it manually after the system is up.

I never realized that there seems to be no way to control the ORDER of services in the Yast[System]Runlevel Editor.

Obviously I can do it by hand by changing the symlinks, but jeez, I think this is a serious deficiency. Certainly it is very important the order in which *some* services are started.

Am I missing something? Shouldn't this be tweakable in Yast?

Thanks.
