G.M.

I'am stucked with YOU.

During a minimal installation via FTP to a locale ftp stored 9.1 version and at ftp.suse.com, I can't update the installed system

Its startup make a network conenction donwload 2 files in:

`/var/lib/YAST2/you/mnt/i386update/9.1/patches`

named:

`directory.3`

`fetchmsttfonts-3`

The error looks like:

Signature check for patch info files failed.

Cannot load patch information.

The PC is a Athlon 900 with 256 mb and 80G disk

Put this harddisk in an other system and I can update with no problems.

Take a working system harddisk from other PC and put it in the Athlon pc

I get te same error with YOU

The Signature check is based on the system and not on a file on the harddisk?

Any idea how to solve this strange behavior?

peter
