Hi All,

I have a problem during mount samba share from suse 9.1 to my file-server that using suse 8.2. Whenever I mount that samba share, UID and GID is changed (it seems like using the same UID and GID from the system) not the same with UID and GID in my computer. So, event with 'rw' permission, I can't write to my home directory in file-server, cause it's not belong to me... Before this I'm using SuSE 8.2, and there's no problem with it.

```
rey@cbn:~> smbmount //192.127.0.2/arie test/ -o
username=arie%arie,uid=rey,gid=users,rw
rey@cbn:~> cd test
rey@cbn:~/test> ls -l
total 89128960
-rwxrwx--- 1 500 568 62976 2003-12-12 14:02 12 Nov 03 pic.doc
-rwxrwx--- 1 500 568 19968 2004-03-15 17:06 15 Maret 2004.doc
-rwxrwx--- 1 500 568 50176 2004-01-19 13:33 19 jan 04 pic.doc
-rwxrwx--- 1 500 568 23221 2004-01-19 13:46 19 jan 04 pic.sxw
-rw-r--r-- 1 500 users 15709 2003-03-18 06:18 addressbook.kab
drwxrwx--- 1 500 568 0 2003-09-20 09:48 Application Data
-rwxr-xr-x 1 500 users 5211 2003-06-18 14:04 arz-license-so-suse.sxw
-rw-r--r-- 1 500 users 0 2002-12-13 04:37 b
```

Here's my /etc/samba/smb.conf in file-server

[global]

```
workgroup = KOMO
netbios name = FILESERVER
server string = FILESERVER
encrypt passwords = Yes
update encrypted = Yes
pam password change = Yes
unix password sync = Yes
name resolve order = wins lmhosts bcst
time server = Yes
unix extensions = Yes
socket options = TCP_NODELAY SO_RCVBUF=8192 SO_SNDBUF=8192
printcap name = CUPS
```

## SuSE: [SLE] Problem mount samba share in SuSE 9.1

```
domain logons = Yes
os level = 64
preferred master = Yes
domain master = Yes
dns proxy = No
create mask = 0770
force create mode = 0770
directory mask = 0770
force directory mode = 0770
hosts allow = 192.127.0. 127.0 192.168.1.
printing = cups
veto files = /*.*/*
```

[homes]

```
comment = Home Directories
valid users = %S
read only = No
create mask = 0640
directory mask = 0750
browseable = No
```

Anyone has a problem with this ? Or any mistake that I made and just dont see it ?

regards,
